Subject: Haskell Lake LUST Site Pilot Study Status

Mr. Harris,

We are still awaiting the updated materials discussed in our call on September 27. We understand the contracted updated plans were received by EPA last Wednesday and expected to be shared with us last week. In the interest and urgency of expressed time constraints, sharing materials for review and coordination is imperative. My Staff and Tribal Contractor are available to discuss updated plans prior to the next Tribal Council Meeting, October 5 2017.

I understand that EPA is working toward the goal of pilot study excavation within the source area. The area includes the Tower Standard Gas Station source property and portions of the affected neighboring property. We also have offered that the evaluation of these three options; excavation, AS/SVE, and Excavation and AS/SVE, specifically address the Contaminants of Concern present at the site.

Expedited review of the initial plan for the Excavation and AS/SVE Feasibility Study has been provided to EPA. This was provided during our September 25 and 27 meeting calls, our written review and comment materials, and reported council actions. We look

forward to continued cooperative work.

Thank You,

Joseph Wildcat Sr

Tribal President
